

BioEcho 50 Reaction Kits

Introductory Offer!

Next Generation kits DNA/RNA extraction kits providing more convenience, quality and speed.

By using the principle of reverse chromatography, BioEcho extraction methods ensure DNA remains untouched and any unwanted sample-derived contaminant is bound and eliminated by the column. Potential inhibitory process reagents are not in use and thus do not have to be removed.

The result: pure DNA by only one centrifugation step.

After just one single spin, the purified high molecular weight RNA/DNA is eluted, while all debris and cellular compartments, inhibitors, small fragments (< 50 bp), nucleotides, and salts are completely removed.

By moving to a BioEcho extraction kit you are supporting:

- environmentally friendly science: no harsh extraction chemicals
- sustainability: with 70% less plastics than standard Silica kits
