Scharlab
The wise choice

Scharlab
THE LAB SOURCING GROUP

Scharlab with the Environment

At Scharlab we believe that the environment is the basis for our future. For this reason, it is one of our main commitments and little by little we are making progress in our aim to be a more ecological and environmentally friendly company.

We have implemented multiple initiatives to reduce the impact of our activity on the environment, summarised in this **ecological Product Info**:

Scharlab is registered in the Carbon footprint register, compensation and carbon dioxide absorption projects (RD 163/2014)

We have created an "Outlet" section on our website, with products that are about to expire, therefore reducing the generation of waste

A cascade control system of the cooling towers allows us to save 54.5% in kW, which is equivalent to the non-emission of around 1,370 kg of CO₂ per month

At Scharlab's warehouses and factory, employees work with PDAs, in this way reducing the consumption of paper and printer toner

We encourage our clients to participate in our environmental awareness efforts with campaigns promoting the reuse of packaging

Scharlab is certified under ISO 14001:2004 Environmental Standard, which is renewed through periodic audits

At Scharlab, we were pioneers in the Returnable Packaging Service which started more than 25 years ago. A reduction of the environmental impact of 298 Tons CO₂ per year has been estimated

We have installed a scrubber to prevent the emission of corrosive vapours into the atmosphere during the production processes
