Announcing the new QIAstat-Dx

Simple & Fast Syndromic Testing Closer to Care!

With an intuitive workflow and the capability to process up to 48 targets utilising real-time PCR technology, the QIAstat-Dx allows you to provide clinicians the answers that matter most.

The first assay to launch for the QIAstat-Dx is the respiratory panel (CE-IVD) which includes 21 targets for common pathogens causing acute respiratory tract infections. This panel utilises powerful QIAGEN sample and assay technologies, to deliver true Sample to Insight processing of even the most challenging samples, including direct swab input.

The second assay to launch for the QIAstat-Dx is the gastrointestinal panel which includes targets for the 24 most common viral, bacterial and parasitic pathogens that cause gastrointestinal infections.

- A true walkaway operation with less than 1-minute hands on time
- Actionable results in about 1 hour
- 8 real-time PCR reaction chambers with 6-plex capability for a total of 48 targets
- On board sample prep including liquids, directly entered swabs, tissue, with inside swab resuspension and cell disruption
- Designed to suit the clinical laboratory environment and to also allow near patient testing
- Full sample traceability with LIS integration
